First Order Date	: October 20, 2008
First Req. Ship Date	: November 3, 2008
Models Affected	: see below for details
Bulletin Number	: 101-08-55

SYSTXCCRCT01

SYSTXCCRWF01

We are very pleased to announce the introduction of the Broadband-ready Remote Access Module accessories to the Infinity System. Like the already available SkyTel-based remote access module (part number: SYSTXCCSAM01), the two new models of the family communicate with the Infinity System using ABCD bus. The A, B & C wires tie into the HVAC system and a separate 110VAC outlet-ready transformer powers the module. However, unlike the SkyTel model, both new models rely on the home's high-speed (broadband) Internet service to communicate from the home to the outside. This, in turn, delivers remote accessibility to the Infinity Systems without the common limitation of SkyTel pager system signal coverage that can be encountered with the SkyTel-based remote access module.

As a reminder, each remote access module (of any type) is able to handle up to two Infinity Systems (unzoned or zoned). And, each user account on <http://www.myinfinity.carrier.com> will allow for up to four (4) remote access modules to be registered, thereby resulting in up to 8 Infinity Systems and up to 64 zones being accessible through a single account.

The two new models also rely on standard ASCII protocol for external communication for Home Automation applications with Home Automation systems that have been verified to be compatible accordingly. Please check with your Territory Service Manager for details. The ASCII protocol for Home Automation can be found under the Literature tab in [www.HVACpartners.com](http://www.HVACpartners.com).

Pricing and initial availability are as follows:

PART NO.	DESCRIPTION	MASTER PRICE	FIRST ORDER DATE
SYSTXCCRCT01	Infinity™ Remote Access Module, CAT-5 wired	\$740.00	October 20, 2008
SYSTXCCRWF01	Infinity™ Remote Access Module, WiFi wireless	\$932.50	October 20, 2008
